

# CONTENTS

PREFACE .....	3
<b>1. Classical logic</b> .....	<b>11</b>
1.1 Logical connectives. Truth-tables .....	11
1.2 The laws of propositional logic .....	13
1.3 Functional completeness. Full disjunctive normal form .....	15
1.3.1. Zhegalkin polynomials.....	16
1.3.2. Sheffer stroke .....	17
1.4 Logical entailment. Axiomatization. Adequacy .....	18
1.5 Historical note .....	22
1.6 First-order predicate logic .....	23
1.6.1. The language of predicate logic .....	23
1.6.2. Interpretation and axiomatization .....	25
1.6.3. The basic properties: completeness, Lindström's theorem, unsolvability .....	29
<b>2. Intuitive understanding of many-valued logic and its appearance</b> .....	<b>32</b>
2.1 Intuitive understanding of many-valued logic .....	32
2.2 Sources of many-valuedness in logic .....	32
2.3 The proof of independence of axioms .....	33
2.4 Aristotle's fatalistic argument .....	36
2.5 Prehistory of appearance of many-valued logic .....	38
<b>3. Three-valued logics</b> .....	<b>40</b>
3.1 Łukasiewicz's three-valued logic $\mathbf{L}_3$ .....	40
3.1.1. Distinctions of $\mathbf{L}_3$ from classical two-valued logic $\mathbf{C}_2$ .....	42
3.1.2. Łukasiewicz's three-valued modal logic .....	45
3.2 Heyting's three-valued logic $\mathbf{G}_3$ .....	48
3.2.1. Brouwer's three-valued logic $\mathbf{G}_3^*$ (dual to $\mathbf{G}_3$ ).....	49
3.2.2. Interrelation between $\mathbf{G}_3$ and $\mathbf{L}_3$ .....	50
3.3 Bochvar's three-valued logic $\mathbf{B}_3$ .....	50
3.3.1. Two levels of $\mathbf{B}_3$ : external logical connectives .....	51
3.3.1.1. Three-valued isomorphs of $\mathbf{C}_2$ .....	53
3.3.2. Axiomatization of $\mathbf{B}_3$ .....	55
3.3.3. Halldén's logic $\mathbf{H}_3$ и Ebbinghaus's logic $\mathbf{E}_3$ .....	57

3.4.	Kleene's three-valued (regular) logics .....	58
3.4.1.	Kleene's strong logic $\mathbf{K}_3$ .....	58
3.4.2.	Kleene's weak logic $\mathbf{K}_3^W$ .....	61
3.4.3.	Regularity and monotonicity .....	62
3.4.4.	Intermediate Kleene's logic $\mathbf{K}_3^{\rightarrow}$ (logic <b>Lisp</b> ) .....	63
3.4.4.1.	Intermediate Kleene's logic $\mathbf{K}_3^{\leftarrow}$ (logic <b>Twin Lisp</b> ) .....	64
3.4.5.	Interrelations between Kleene's regular logics .....	65
3.4.6.	<b>P</b> -logics .....	67
3.5.	Three-valued paraconsistent logics .....	68
3.5.1.	Priest's logic <b>LP</b> .....	69
3.5.2.	Logic <b>PCont</b> .....	70
3.5.2.1.	Logic <b>PCont</b> as <b>RM3</b> .....	71
3.5.2.2.	Lattice of paralogs .....	72
3.5.3.	Logic <b>J<sub>3</sub></b> .....	73
3.5.4.	Logic <b>P<sup>1</sup></b> and <b>P<sup>2</sup></b> .....	75
3.5.4.1.	Paracomplete logics <b>I<sup>1</sup></b> and <b>I<sup>2</sup></b> dual to <b>P<sup>1</sup></b> and <b>P<sup>2</sup></b> .....	77
3.6.	Sheffer's stroke for some three-valued logics .....	77
3.7.	Some applications .....	79
3.8.	General questions .....	81
3.9.	The lattice of implicative extensions of Kleene's regular logic .....	83
<b>4.</b>	<b>Logical matrices and lattices</b> .....	<b>87</b>
4.1.	The notion of logical matrix .....	87
4.2.	Basic properties of logical matrices .....	88
4.3.	Operations over the matrices .....	93
4.3.1.	Direct product of matrix for $\mathfrak{M}_2^C$ with itself .....	94
4.3.2.	Other operations. Finite approximation .....	96
4.4.	The notion of lattice. Basic properties .....	99
4.4.1.	Boolean algebras .....	102
4.4.2.	Other "logical" algebras .....	103
4.5.	Algebraic semantics .....	106
4.5.1.	Algebraization of $\mathbf{L}_3$ .....	110
4.5.2.	Algebraization of some other three-valued logics .....	112
<b>5.</b>	<b>Finite-valued logics</b> .....	<b>114</b>
5.1.	Łukasiewicz's finite-valued logics $\mathbf{L}_n$ .....	114
5.1.1.	Matrix logics $\mathbf{L}_n$ .....	114
5.1.2.	Interrelations between finite-valued logics $\mathbf{L}_n$ .....	115
5.1.3.	$J_I$ -operators .....	116
5.1.4.	Ślupecki's operators for $\mathbf{L}_n$ .....	116
5.1.5.	McNaughton's criterion of function definability in $\mathbf{L}_n$ .....	117

5.1.6.	Axiomatization of $\mathbf{L}_n$ .....	117
5.1.7.	Cardinal degree of completeness of $\mathbf{L}_n$ .....	120
5.1.8.	$\mathbf{L}_n$ and Gödel's $n$ -valued logics $\mathbf{G}_n$ .....	121
5.1.9.	Algebraization of $\mathbf{L}_n$ .....	123
5.2.	Post's logics $\mathbf{P}_n$ .....	127
5.2.1.	Matrix logic $\mathbf{P}_n$ .....	127
5.2.1.1.	Post's three-valued logic $\mathbf{P}_3$ .....	128
5.2.2.	Post's algebras .....	129
5.2.3.	Axiomatization of logics $\mathbf{P}_n$ .....	131
5.3.	The other finite-valued logics .....	132
5.4.	Four-valued logics .....	133
5.4.1.	Introductory remarks .....	134
5.4.2.	$\mathbf{L}$ -modal logic of Łukasiewicz .....	135
5.4.3.	The lattice of extensions of four-valued classical logic $\mathbf{C}_4$ .....	138
5.4.3.1.	Modal logic $\mathbf{V2}$ .....	140
5.4.4.	Belnap's logic $\mathbf{DM4}$ .....	141
5.4.4.1.	Logic $\mathbf{DM4}$ with modal operators .....	145
5.4.4.2.	Logic $\mathbf{DM4}$ with endomorphisms .....	146
5.4.4.3.	Logic $\mathbf{DM4}$ with implication .....	148
5.4.4.4.	Bilattices .....	150
5.4.4.4.1.	Logical bilattice: implication and classical negation .....	153
5.4.5.	Others four-valued logics .....	156
5.4.6.	"Truth logic" $\mathbf{Tr}$ and Aristotle's fatalistic argument .....	158
5.4.6.1.	Logic $\mathbf{Tr}$ .....	158
5.4.6.1.1.	Axiomatization of logic $\mathbf{Tr}$ .....	159
5.4.6.2.	Logic $\mathbf{Tr}$ and axiomatic theories of truth .....	160
5.4.6.3.	Tarski's convention and logical fatalism .....	161
<b>6.</b>	<b>Axiomatization of finite-valued logics .....</b>	<b>163</b>
6.1.	Prehistory .....	163
6.2.	Others methods .....	164
6.3.	Anshakov–Rychkov's algorithm .....	164
6.3.1.	Preliminary remarks .....	166
6.3.2.	Axiomatization .....	168
6.3.2.1.	Syntax .....	168
6.3.2.2.	Semantics .....	172
6.3.3.	Generalization and others questions .....	173
6.4.	Some reflections .....	175

<b>7. Many-valued logic as a functional system</b>	<b>178</b>
7.1. Formulas model of $n$ -valued logic	178
7.1.1. A notion of a function of $n$ -valued logic.	
Initial functions	178
7.1.2. Formulae as superposition of initial functions	180
7.2. Function algebras	182
7.2.1. Close operation, closed classes and bases	182
7.2.1.1. Post's classes	185
7.3. The problem of functional completeness	185
7.3.1. Examples of functional complete systems	186
7.3.2. Indications of functional completeness and non-completeness	189
7.3.3. Criteria of functional completeness. Precompleteness	190
7.3.3.1. Precomplete classes in $P_2$ and $P_3$	191
7.3.3.2. Precomplete classes in $P_n$	193
7.3.3.2.1. "Maximal" precomplete classes and their bases	195
7.3.4. Sheffer functions	197
7.3.4.1. Sheffer function for $L_n$	199
7.4. The fundamental differences of many-valued logic from two-valued one. Continuity	200
7.5. Three-valued logics: functional properties	201
7.5.1. Classes of functions and bases for $P_3$	202
7.5.2. Submaximal clones	202
7.5.3. Functional properties of $B_3$	205
7.5.3.1. Hypothesis on criteria of continuity of three-valued logics	207
7.5.4. $S$ -classification	207
7.6. Łukasiewicz's logics $L_n$ and prime numbers	207
7.6.1. Functional properties of $L_n$ (V.K. Finn's theorem)	208
7.6.2. Matrix logic for prime numbers	210
7.6.3. Algorithm for generation of classes of prime numbers	213
<b>8. Infinite-valued logics</b>	<b>216</b>
8.1. Łukasiewicz's infinite-valued logic $L_\infty$	216
8.1.1. Algebraization of $L_\infty$	221
8.1.2. Changing of the set of truth-values	226
8.2. Intuitionistic logic <b>Int</b> and the class of superintuitionistic logics	227
8.2.1. Appearance of <b>Int</b>	227
8.2.2. Basic properties of <b>Int</b>	228
8.2.2.1. Philosophical interpretation of <b>Int</b> (possible world semantics)	230

8.2.3.	Superintuitionistic logics	232
8.2.3.1.	Gödel–Dummett’s logic $\mathbf{G}_\infty$	233
8.3.	Synthesis of logics $\mathbf{L}_\infty$ and $\mathbf{G}_\infty$	234
8.3.1.	Symmetrical Heyting’s monoid $SHM$ and Wajsberg–Heyting algebra $WH$	235
8.3.1.1.	Algebras equivalent with $WH$	237
8.3.2.	Logic without fixed points $\mathbf{LG}_\infty^*$	239
8.4.	Modal logics	241
8.4.1.	C.I. Lewis and K. Gödel	241
8.4.2.	Some modal logics	242
8.4.2.1.	Tabularity and pretabularity	244
8.4.3.	Kripke frames and correspondence theory	245
8.4.4.	Important digression	246
8.5.	Relevance logics	248
8.5.1.	Variable sharing principle and logic $\mathbf{R}$	248
8.5.2.	Some unusual properties	251
8.5.3.	Logic $\mathbf{RM}$	252
8.5.3.1.	Logics $\mathbf{RM}_{\rightarrow, \sim}$ and $\mathbf{RM}_{\rightarrow}$	254
8.6.	Paraconsistent logic $\mathbf{C}_\omega$ and hierarchy of its extensions	255
8.6.1.	Logic $\mathbf{C}_\omega$ and its properties	256
8.6.2.	Hierarchy of paraconsistent systems $\mathbf{C}_n$	257
8.6.3.	Non-truth-functional semantics for paraconsistent logics	258
8.6.3.1.	Non-algebraization of $\mathbf{C}_1$	259
8.7.	Others infinite-valued logics	260
8.7.1.	Generalization of Post’s logic $\mathbf{P}_n$	261
8.7.2.	Limited and continuous logics	261
8.7.2.1.	Non-Archimedean logical many-valuedness	262
8.7.3.	Logic with properties of other logics	263
8.7.3.1.	Many-valued modal logics	264
8.7.4.	Duality of intuitionistic and paraconsistent logics	266
<b>9.</b>	<b>Fuzzy set theory and fuzzy logics</b>	<b>268</b>
9.1.	Preamble	268
9.2.	Fuzzy sets and corresponding logic	270
9.3.	The second stage of fuzzification	274
9.3.1.	Fuzzy subsets of type 2	276
9.3.1.1.	Restrictions and simplifications	277
9.3.1.2.	Hierarchy of minimal models for fuzzy algebras of type 2	280
9.3.2.	On the way to fuzzy logic	282
9.4.	Logics based on $\mathbf{t}$ -norms	285

9.4.1.	<b>T</b> -norms .....	285
9.4.2.	Semantic approach .....	287
9.4.3.	The basic fuzzy logic <b>BL</b> and its extensions .....	289
9.4.3.1.	The basic fuzzy predicate logic <b>BL<math>\forall</math></b> .....	290
9.4.4.	Monoidal logic based on <b>t</b> -norm .....	291
9.4.5.	Extensions of <b>t</b> -logics by new connectives and others questions .....	293
<b>10.</b>	<b>Truth-values: Interpretation of many-valued logics</b> .....	<b>294</b>
10.1.	Fixation of the problem .....	294
10.2.	Frege's logical world: two truth-values .....	296
10.3.	Others logical worlds .....	297
10.4.	Suszko's thesis .....	300
10.5.	Intuitive interpretation of <b>L<sub>n</sub></b> . The problems .....	305
10.6.	T-F-sequences as truth-values .....	309
10.7.	Factor-semantics: subsets <i>versus</i> elements .....	311
10.7.1.	Factor-semantics for infinite-valued logic <b>L<sub><math>\Sigma</math></sub></b> .....	315
10.8.	Structuralization of truth-values .....	318
<b>Appendix:</b>	<b>Boolean lattices of implicational logics</b> .....	<b>324</b>
1.	The problem of classification of implicational logics. Combinators .....	324
2.	The lattice of implicational logics <b>L(H<math>\rightarrow</math>)</b> .....	326
3.	The lattice of implicational logics <b>L(TV<math>\rightarrow</math>)</b> : classical versions of <b>BCI, BCK</b> and <b>R<math>\rightarrow</math></b> .....	330
4.	Maximal lattice <b>L(TV<math>\rightarrow</math>)</b> : logics <b>RM<math>\rightarrow</math></b> and <b>L<math>\infty\rightarrow</math></b> .....	335
5.	The lattice of implicational logics <b>L(TV<math>\rightarrow</math>)</b> : logics <b>E<math>\rightarrow</math></b> , <b>S4<math>\rightarrow</math></b> and <b>S5<math>\rightarrow</math></b> .....	340
6.	Some full propositional logics .....	341
7.	Some remarks on classification of logics .....	343
