BIBLIOGRAPHY
OF «LOGICAL INVESTIGATIONS»

Author’s Index of vol. 1-10 of «Logical Investigations»

V.A.Smirnov’s Results in the Field of Modern Formal Logic .........................................................IV 40
V.A.Smirnov’s Publications ...............................................................................................................IV 70
Bibliography of “Logical Investigations” (in Russian, const. by Shiyan T.A.) .........................................................X 278
Bibliography of “Logical Investigations” (in English, const. by Shiyan T.A.) ..........................................................X 293

Alioshina N.A.
The Definability of the Qualitative Independence of Events in Terms of Extended Indicator Functions (with Suppes P.) .................................................................II 105
Probability Logic in Artificial Intelligence ................................II 113

Anisov A.M.
Might be a space continuous while time would be discrete? ..............................................................I 210
Computer Programing of Becoming ..............................................................................................II 170
An Abstract computability and ABT programming language ....................................................................III 233
Basic Principles of V.A.Smirnov’s Conception of Scientific Philosophy ........................................IV 94

1 Const. by Shiyan T.A. (Шиян Т.А.).

293
Semantics of Indefiniteness ............................................... IV 271
The Direction and Reversibility of Time ......................... VI 195
An axiomatic calculus of uncertainty ............................. VII 164
Properties of Time ............................................................. VIII 5
Logic of uncertainty and uncertainty in time .............. IX 5
Certainities in classical logic .......................................... X 7

Anshakov O.M.
On axiomatizability of many-valued logics caused by the formalization of plausible reasonings (with Skvortsov D.P., Finn V.K.) ............................................. I 222
J-Logics and Classes of Algebras Corresponding to these Logics .......................................................... V 25

Bakhtijarov K.I.
The Interactive Game “Carroll” and the Calculator “Aristotle” ............................................................... VI 268

Batens D.
Dynamic Semantics Applied to Inconsistency-Adaptive Logics ............................................................... V 74
A Universally Abnormality-Adaptive Logic ....................... VIII 256

Bazhanov V.A.
I.E. Orlov as logician, philosopher and scientist. Peculiarities of scientific search. ................................... IX 32

Bezhanishvili M.N.
On a Partially-Interpretated Tableaux Calculus ............... V 230
The Completeness Theorem for One Bimodal System of Knowledge and Belief ........................................... VI 47
Interpolation theorem for Hao Wang’s partial predicate calculus ........................................................... VII 148
Wang Hao’s Calculi of Partial Predicates and their Extensions that Allow Iteration of Implication ............... VIII 26
Partial Epistemic Logics and “Contingent” Identities ...... IX 55

Béziau J.-Y.
What is Propositional Classical Logic? (A Study in Universal Logic) ......................................................... VIII 266
S5 is a Paraconsistent Logic and so is First-Order Classical Logic ........................................................... IX 301
New Light on the Square of Oppositions and its Nameless Corner .......................................................... X 218

Birjukov B.V.
From the History of Logic in Russia: the “Carroll’s
Blinov A.I.

Semantic games with random steps.................................III 257
Games With Common Belief On Payoff Function ..............VIII 278
Nested Supervaluations for Future Indefinite
Contingent Vagueness .............................................IX 310
Rationalities in conflict: compensatory logico-
cognitive irrationality in interactive contexts ..............X 233

Bocharov V.A.

A Proof search algorythm for natural classical
propositional calculus (with Bolotov A.E., Gorchakov
A.E.) ........................................................................III 181
“Business is Business!“ .............................................IV 7
Algorithm of Proof Search in Classical Predicate
Calculus (with Bolotov A.E., Gorchakov A.E.) ............V 171
Kant’s model of God (with Yuraskina T.I.) .................VII 308

Bolotov A.E.

A Proof search algorythm for natural classical
propositional calculus (with Bocharov V.A.,
Gorchakov A.E.) ................................................III 181
Algorithm of Proof Search in Classical Predicate
Calculus (with Bocharov V.A., Gorchakov A.E.) ..........V 171

Buszkowski W.

Syntactic Lambek calculus and its semantic ..............I 77

Bystrov P.I.

Non-standard method of tableau constructions for
modal and relevant logics ........................................I 156
Relevant Systems with Global Rules of Inference ..........II 139
A Sequential calculus of the formulae with temporal
parameters..........................................................III 81
Non-Standard Rules of Inference and their Role in
Logical Systems ....................................................IV 245
Decidable Calculus Based on V.A.Smirmov’s Absolute
Relevant System ......................................................V 129
Mutual Transformation of Sequent and Natural
Deductions in Modal Logic .....................................VI 61
Analytical tableau for positive logic free from
“paradoxes“ of material implication .........................VII 181
Substructural version of implicative-negative part of
propositional modal system S5...............................X 23

Chagrov A.V.
